Britain to work with WHO on 'pandemic radar' to track diseases

- Britain will work with the World Health Organization (WHO) to develop a 'pandemic radar' system to identify new coronavirus variants quickly and track emerging diseases globally to ensure the world is never 'caught unawares again.'
- Prime Minister Boris Johnson announced the plan for a new 'Global Pandemic Radar' ahead of a G20 Global Health summit on Friday in Rome, where he will speak.
- Johnson's office said it would involve a network of surveillance hubs that could watch out for outbreaks and share data on variants and vaccine resistance.
- He is using Britain's presidency of the G7 to highlight the need to be prepared for future pandemics, launching an expert group to examine how the development of vaccines against future diseases can be expedited.
- [Britain has extensive virus-sequencing capabilities that have come to the fore as coronavirus variants increasingly raise the risk of new waves of infections.](#)
- WHO Director-General Tedros Adhanom Ghebreyesus said Britain had 'set a strong example for pathogen surveillance and sequencing, as well as vaccine development.'
- 'I am delighted that under PM Johnson, and the UK, will partner with WHO to contribute to stronger global surveillance and a safer world,' he said.
- At Friday's summit, leaders of the world's largest economies will adopt a declaration recommending voluntary actions to boost COVID-19 vaccine production, snubbing a push from the United States and other nations on patent waivers, the final text shows.
- Drugmakers are also set to announce they will provide large supplies of at cost COVID-19 vaccines to poor nations this year to try to redress a global imbalance, an EU official said.

WTO chief calls for diversification of vaccine production

WTO chief calls for diversification of vaccine production

The head of the World Trade Organization said Thursday it is of paramount importance to diversify vaccine manufacturing and to have more production taking place in Africa and Latin America to contain the pandemic. On the eve of a global health summit in Rome, WTO Director-General Ngozi Okonjo-Iweala told European Union legislators that normal market forces for exports and imports couldn't apply when it comes to the life-or-death issue of COVID-19 vaccines, as many of the world's wealthiest nations were hoarding the shots for their own population when the crisis hit their home

turf. She said the world has the capacity to manufacture some 5 billion vaccine doses overall but that as the virus has spread “we require twice and three times that. So the capacity was not there.”

EU presents WTO plan to boost COVID vaccine output

EU presents WTO plan to boost COVID vaccine output

The European Union has put forward a plan it believes will help boost the production and availability of COVID-19 vaccines more effectively than a proposed waiver of patent rights now backed by the United States. Under pressure from developing countries demanding a waiver of intellectual property (IP) rights for vaccines and treatments, the EU presented on Wednesday an alternative focused on export restrictions, pledges from vaccine developers and the flexibility of existing World Trade Organization (WTO) rules.

China says providing vaccines to almost 40 African nations

China says providing vaccines to almost 40 African nations

China said Thursday it is providing COVID-19 vaccines to nearly 40 African countries, describing its actions as purely altruistic in an apparent intensification of what has been described as “vaccine diplomacy.” The vaccines were donated or sold at “favorable prices,” Foreign Ministry official Wu Peng told reporters. Wu compared China’s outreach to the actions of “some countries that have said they have to wait for their own people to finish the vaccination before they could supply the vaccines to foreign countries,” in an apparent dig at the United States. “We believe that it is, of course, necessary to ensure that the Chinese people get vaccinated as soon as possible, but for other countries in need, we also try our best to provide vaccine help,” said Wu, who is director of the ministry’s Africa department.

Latin America poised to benefit as U.S. raises exports of COVID-19 shots -sources

Latin America is poised to receive millions of U.S.-made COVID-19 shots in the coming weeks as the United States emerges as a top exporter of vaccines against the novel coronavirus, according to two people familiar with the matter. The United States is considering prioritizing countries within its own hemisphere for the 80 million domestically-made vaccine doses it has pledged to send abroad, one person familiar with the matter said. Meanwhile, Pfizer Inc has begun exporting millions of its U.S.-made shots largely to countries in Central and South America, a second person familiar with the matter said.

COVID-19: Ursula von der Leyen says EU will reach vaccination targets 'without sealing itself off from the world'

COVID-19: Ursula von der Leyen says EU will reach vaccination targets 'without sealing itself off from the world'

The EU will reach its vaccination targets “without sealing itself off from the world”, the EU Commission president has said - in what has been interpreted as a snipe at the UK and US. Ursula von der Leyen said critics of the EU vaccination campaign should keep in mind that the EU had exported 220 million jabs, almost as many as it has used for its own citizens. She added: “Others are keeping their entire vaccine production all to themselves, but the EU will reach its vaccination

targets without sealing itself off from the world."

EU grapples over COVID-19 passes for summer travel

EU grapples over COVID-19 passes for summer travel

The European Union reached a deal on Thursday on COVID-19 certificates designed to open up tourism across the 27-nation bloc this summer, the centre-right European People's Party (EPP) said. European Parliament lawmakers and current EU president Portugal representing the bloc's 27 members sealed the agreement after a fourth round of negotiations on Thursday afternoon. The certificate will take the form of a QR code on a smartphone or paper, letting authorities determine the status of a visitor based on records in their home EU country. The certificate would show if a person had received a vaccine, had a recent negative test or had immunity based on recovery.

UAE and Bahrain offer Sinopharm coronavirus booster shots amid questions on Chinese vaccine efficacy

UAE and Bahrain offer Sinopharm coronavirus booster shots amid questions on Chinese vaccine efficacy

The United Arab Emirates said that it will offer an additional dose of the Chinese-developed Sinopharm coronavirus vaccine to people who have already received two shots of the vaccine more than six months ago. The decision marks a significant expansion in the UAE's booster shot program, which is among the first in the world. The country had previously administered a third Sinopharm shot to some people whose immune systems did not create enough antibodies after vaccination. In March, a top researcher at G42, an Abu Dhabi-based firm that held late-stage trials of the Sinopharm vaccine, said very few people would be likely to need the booster.

Egyptian gov't mulls giving 3rd coronavirus vaccine dose

Egyptian gov't mulls giving 3rd coronavirus vaccine dose

Egypt is considering administering a third dose of coronavirus vaccination, in anticipation of virus mutations that have appeared in other countries, Advisor to the Egyptian President for Health Affairs Mohamed Awad Tag Eddin. Tag Eddin added, in a telephone interview on MBC Masr on Wednesday evening, that China has announced that those who received two doses of its Sinopharm vaccine must receive a third dose. The United Arab Emirates, one of the first countries to use Sinopharm, announced earlier this week that it will be administering booster shots of the vaccine.

UK's Indian Covid variant surge fuelled by test-and-trace failures, report finds

UK's Indian Covid variant surge fuelled by test-and-trace failures, report finds

The surge in the Indian Covid-19 variant was fuelled by failures in England's test-and-trace system, a report has found. Eight local authorities did not have access to the full data on positive tests in their areas for three weeks in April and May, it says. The number of missing cases was highest in Blackburn with Darwen, in Lancashire - where a recent surge in infections was linked to the Indian variant. The other areas affected by the apparent technical glitch were Blackpool, York, Bath and North East Somerset, Bristol, North Somerset, Southend-on-Sea and Thurrock, the BBC revealed.

Coronavirus: Canada-wide study to investigate mix-and-matching vaccine doses

Coronavirus: Canada-wide study to investigate mix-and-matching vaccine doses

A new Canada-wide study will look at the effect of using different COVID-19 vaccine doses in Canadian adults to determine if mixing and matching vaccines yields a strong immune response and how long the response lasts. The study, announced Thursday, will investigate the use of different vaccines for first and second doses in 1,300 adult participants. The study will be conducted in conjunction with the COVID-19 Immunity Task Force, Vaccine Surveillance Reference Group, Canadian Immunization Research Network and Dalhousie University. "As questions of vaccine interchangeability arise and alternative dosing intervals are being used in public health programs, our objective is to determine: what are the effects of different dosing intervals of the vaccines on immunity and safety?" said Dr. Joanne Langley, co-principal investigator of the study and professor at Dalhousie University, said in a press release.

Covid-19: Why prioritising prevention matters in a pandemic of cures

Covid-19: Why prioritising prevention matters in a pandemic of cures

Prevention is better than cure. Simple. Clear. Logical. Except that it is easily overcomplicated, clouded, and misplaced. When we forget that prevention is better than cure, primary care becomes an easy scapegoat, even though the pandemic has reinforced its importance in improving baseline population health, reducing health inequalities, delivering a vaccination strategy, and keeping people out of hospital. We might forget the mammoth efforts of general practice to reconfigure

care—and then reverse some of that reconfiguration—the extra burden and complexity created by limitless digital access of patients to health professionals,³ and the ingenuity and partnership now needed between primary and secondary care to clear a 4.7 million person waiting list with £160m of innovation funding. Or that preventing racism in general practice and in hospitals, in doctors' education, training, assessment, and disciplinary procedures, is better for patients, an issue that the UK's General Medical Council is now promising to tackle head on.

Contact Tracing for Covid-19 — A Digital Inoculation against Future Pandemics

Contact Tracing for Covid-19 — A Digital Inoculation against Future Pandemics

Outbreaks of coronavirus disease 2019 (Covid-19) emerged in the United States and in European countries in February 2020. Urgent action was called for, since experts estimated that 30 to 70% of people in these Western countries could become infected — a frightening projection at a time when the Covid-19 mortality rate was estimated to be substantially higher than we now know it to be. In March 2020, Michael Ryan, executive director of the Health Emergencies Program of the World Health Organization (WHO), implored countries to act, noting that when it comes to epidemic response, "speed trumps perfection" but "the greatest error is not to move." At the time, the only tools for containing Covid-19 were social distancing, testing, case isolation, and contact tracing.

Nearly 1 million excess deaths in 29 nations during pandemic

Nearly 1 million excess deaths in 29 nations during pandemic

Nearly 1 million more people than normal died in 29 high-income countries during the COVID-19 pandemic in 2020, according to a time series study yesterday in BMJ. University of Oxford researchers led the study, which involved calculating weekly excess deaths for each included country in 2020, adjusting for age, sex, and seasonal and annual mortality trends in the previous 5 years. They estimated that 979,000 more people than expected died of all causes during the pandemic, with rates generally increasing with advancing age. All countries, except for Denmark, New Zealand, and Norway, had more deaths than expected, especially in men. But the excess death rate in the United States was higher among women than men in the 85 and older age-group.

Covid-19: What went wrong in Singapore and Taiwan?

Covid-19: What went wrong in Singapore and Taiwan?

They've been hailed as virus success stories - places that have seen virtually zero or single-digit Covid cases since the start of the year. But this month, Singapore and Taiwan have both seen a sudden and aggressive rise in cases - with Singapore logging 248 new cases just last week, and Taiwan 1,200 local infections. Both places have gone into a heightened state of restrictions, limiting

the size of social gatherings and closing schools. By global standards, these numbers may seem small - but for these places, these figures would have been unthinkable just months ago. So what exactly went wrong?

Nervous workers struggle to adjust to new mask policies

Nervous workers struggle to adjust to new mask policies

An abrupt relaxation of mask policies has left workers at supermarkets and other stores reeling as they try to sort out what the new environment means for their own safety and relationship with customers. Kroger, the country's largest grocery chain, became one of the latest to announce that, starting Thursday, workers and customers can stop wearing masks in states where mandates are no longer in effect. Other companies that have adopted similar changes include Amazon, Walmart, Best Buy, Macy's, Costco, Home Depot, Trader Joe's and Target, following updated guidance from the Centers for Disease Control. Some workers have taken to social media to cheer, but many others protested. Some don't trust customers — or their co-workers — to be truthful about their vaccination status since most companies are not requiring proof.
